A bibliography of the Anatidae of South Asia

Aasheesh Pittie

Bombay Natural History Society

2004

ENVIS

ENVIS (Environmental Information System) is a network of subject specific nodes located in various institutions throughout the country. The Focal Point of the present 25 ENVIS centres in India is at the Ministry of Environment and Forests, New Delhi, which further serves as the Regional Service Centre (RCS) for INFOTERRA, the global information network of the United Nations Environment Programme (UNEP) to cater to environment information needs in the South Asian sub-region. The primary objective of all ENVIS centres is to collect, collate, store and disseminate environment related information to various user groups, including researchers, policy planners and decision makers.

The ENVIS Centre at the Bombay Natural History Society was set up in June 1996 to serve as a source of information on *Avian Ecology* and *Inland Wetlands*.

ENVIS TEAM AT THE BNHS

Centre-in-Charge	:	Mr. J.C. Daniel
Project Coordinator	:	Dr. Asad R. Rahmani
Scientist-in-Charge	:	Mr. Girish Jathar
Information Officer	:	Mr. Sujit Narwade
Editorial Adviser	:	Dr. Gayatri Ugra

BNHS Mission

Conservation of nature, primarily biological diversity, through actions based on research, education and public awareness

A bibliography of the Anatidae of South Asia

Aasheesh Pittie

8-2-545 Road No. 7, Banjara Hills, Hyderabad 500034, India. Email: aasheesh.pittie@gmail.com

INTRODUCTION

This bibliography has been extracted from my larger bibliographic database (Pittie 2005) and covers the political boundaries of the following south Asian countries: Afghanistan, Bangladesh, Bhutan, India, the Maldives, Myanmar (Burma), Nepal, Pakistan, and Sri Lanka. Tibet is also covered. It comprises papers, popular articles, books, published and un-published reports, and chapters, in which members of the avian family, Anatidae (ducks, geese, swans), find mention. It covers a period of over two and a half centuries, from 1750 up to 2004.

Of the 49 genera and 158 species that comprise the family Anatidae worldwide (Dickinson 2003), 19 genera and 46 species are found in south Asia. Of these, the Pink-headed Duck *Rhodonessa caryophyllacea* is considered 'Critically Endangered', White-headed Duck *Oxyura leucocephala* and White-winged Duck *Asarcornis scutulata* are considered 'Endangered', Baikal Teal *Anas formosa*, Marbled Teal *Marmaronetta angustirostris*, and Baer's Pochard *Aythya baeri* are considered 'Vulnerable', and Ferruginous Pochard *Aythya nyroca* is considered 'Near Threatened' (Islam and Rahmani 2004).

A bibliography of this nature cannot pretend to be complete and this is no exception. There are always publications beyond the reach of the bibliographer. However, most of the citations that contain a single taxon or several taxa of the Anatidae, at least when mentioned in the title of a published work, are listed in this bibliography. Anatidae listed, i.e. mentioned without details, in the text of a paper or book, either as part of a checklist or otherwise, are another matter altogether. Keying in those taxa is an enormous task and might take several years to complete, though work towards that end has commenced. It is also felt that including such references in this bibliography would dilute its usefulness as the only result of a search in such works would result in a name (s), probably without any information attached to it. At best it would reveal, in a rather abstract manner,

a distribution pattern of the Anatidae. Accuracy in transcribing is a basic tenet of bibliography and though great care has been taken to ensure it, mistakes may have crept in and pertinent papers, notes, reports, books, etc., may have been inadvertently left out. This is the more likely in that I have not seen all the entries listed below in the original, but have freely taken them second hand from the 'References' or 'Further Reading' sections of papers and books.

Authors have been arranged alphabetically and their work chronologically. Multi-author papers have been listed under the name of the senior author (i.e., the first author, not the oldest). Separate entries have not been made for co-authors. Where a title was not given in the original, a suitable descriptive substitute was coined, generally comprising a part of or the complete first sentence, and is placed within brackets. In some cases, where the actual year of publication differs from the year printed on the cover, the former is entered after the author's name, and taken to be the year of publication, while the latter is given at the end of the citation, within parentheses.

One of the tools of researching inaccessible publications is the perusal of earlier bibliographies. I have consulted Mengel (1972, 1983), Ripley and Scribner (1961) and Zimmer (1926) and have quoted from them so as to present as complete a citation as possible. Extracts from the works of these authors are followed by their name (s) within brackets.

There are several changes in the systematic listing vis-à-vis Manakadan and Pittie (2002). Dickinson (2003), being the most up to date, is followed here. The bibliography is quite simple to use. An index has been provided at the end of the work, to guide you straight to a genus or species or to the general section on 'Anatidae'. Works that could not be listed under a species, but concern a genus, have been listed under the latter.

ACKNOWLEDGEMENT

I would like to thank Edward C. Dickinson for reviewing an earlier draft of the 'Introduction'.

UNDER PREPARATION

A Field Guide to the Butterflies of India
by Isaac Kehimkar

BOMBAY NATURAL HISTORY SOCIETY

Founded in 1883 for the study of natural history, the Bombay Natural History Society (BNHS) is now one of the premier research and conservation organisations in the country. The Society publishes a journal, the *Journal of the Bombay Natural History Society*, devoted to natural history and also has a popular publication, *Hornbill*, for the layman. It has also published a number of books on wildlife and nature. Its library has a large collection of books and scientific journals on wildlife and the environment. The Society's invaluable collection of bird, mammal, reptile, amphibian, insect and plant specimens has been recognised as a National Heritage Collection.

Membership of the Society is open to individuals and institutions within India and abroad. For more details, please write to:

**Membership Officer,
Bombay Natural History Society,
Hornbill House,
Shaheed Bhagat Singh Road,
Mumbai-400 023. INDIA.**

Buceros is an ENVIS (Environmental Information System) newsletter published thrice yearly by the ENVIS Centre at the BNHS, sponsored by the Ministry of Environment and Forests, New Delhi. The Centre collects, collates, stores and disseminates information on *Avian Ecology* and *Inland Wetlands*.
